Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

isolated glial cell derived neurotrophic factor receptor alpha-
gray useful to develop products to diagnose and treat associated
disorders, particularly enteric nervous system or kidney disorders
disorders, particularly enteric nervous system or full-length rat glial cell derived neurotrophic
factor receptor alpha (GDNFR alpha) (see W27327), a novel
disorder for GDNF. It was isolated by expression cloning.
A cDNA library obtained from ventral midbrain tissue of E14 rat
cembryos was generated in a cytomegalovirus-based vector. cDNA
colones were transfected into COS 7 cells and expression of
putative GDNF receptors was detected by binding of iodinated GDNF.
A single positive pool was obtained, from which the cDNA clone was
closed to disorder the cDNA cone was detected by binding the cDNA can be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         T84975 standard; cDNA; 2378 BP.

produce GDNFR alpha in transformed host cells. The invention relates to novel uses of GDNF and its receptor. In particular, it relates to native rat GDNFR alpha (see W27327), its variants and soluble derivatives (extracellular domain), chimeric GDNFR alpha and antibodies which bind to the GDNFR alpha, including agonist and neutralising antibodies, as well as various uses for these molecules. It also relates to assay systems for detecting ligands to GDNFR alpha, systems for studying the physiological role of GDNFR alpha, systems for identifying GDNF-related conditions, methods for identifying molecules homologous to GDNFR alpha, and therappeutic techniques (claimed) for the treatment of GDNF-related and GDNFR alpha-related conditions, particularly kidney disease associated with glomerulonephritis and enteric nervous system related disorders. Transgenic and knockout animals are also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   uery Match

PI useful to develop products to diagnose and treat associated disorders particularly enteric nervous system or kidney disorders whi; PT useful to develop products to diagnose and treat associated disorders, particularly enteric nervous system or kidney disorders products to diagnose and treat associated disorders, particularly enteric nervous system or kidney disorders products to diagnose and treat associated for useful to develop products to diagnose and treat associated for memperature of the clone of kidney disorders products to network foll; 100pp; English.

CC This cDNA sequence comprises the 3' end of mouse full-length (CC gilla) coll derived neurotrophic factor receptor alpha (GDNFR alpha) (CC gene 25; the 5' end of the clone is given in CC grate GDNA (see T04975) as probe. The invention relates to native rat GDNFR alpha (see W27327), its variants and soluble derivatives (extracellular domain), chimeric GDNFR alpha and CC antibodies which bind to the GDNFR alpha, including agonist and CC derivatives (extracellular domain), chimeric GDNFR alpha and soluble derivatives (extracellular domain), chimeric GDNFR alpha and cC therefore the conditions as well as various uses for these conditions, for detecting ligands cc GDNF diagnostic techniques for studying the physiological role of CC GDNF diagnostic techniques for studying the physiological role of CC GDNF diagnostic techniques for identifying GDNF-related conditions, and conditions, particularly kidney disease conditions, particularly kidney disease conditions and conditions, particularly kidney disease conditions and conditions are also cclaimed disease conditions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
         CC This CDNA sequence comprises the 5' end of mouse full-length CC glial cell derived neurotrophic factor receptor alpha (GDNFR alpha) CC (see W27327) clone 26; the 3' end of the clone is given in CT 84977. Clone 26 was isolated from a mouse cDNA library using CC rat GDNFR alpha cDNA (see T84975) as probe. The invention relates CC to novel uses of GDNF and its receptor. In particular, it relates CC to native rat GDNFR alpha (see W27327), its variants and soluble CC derivatives (extracellular domain), chineric GDNFR alpha and CC neutralising antibodies, as well as various uses for these CC doubtes. It also relates to assay systems for detecting ligands CC molecules. It also relates to assay systems for detecting ligands CC GDNFR alpha, systems for identifying GDNF-related conditions, methods for identifying molecules for identifying GDNF-related conditions of CC GDNFR alpha, related conditions, particularly kidney disease CC associated with glomerulonephritis and enteric nervous system CC claimed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
This DNA sequence comprises a human EST-derived sequence designated CY 170al0.rl. It can be used to identify gilal cell derived CY 170al0.rl. It can be used to identify gilal cell derived CY 170al0.rl. It can be used to identify gilal cell derived CY 170al0.rl. It can be used to identify gilal cell derived CY 170al0.rl. It seems to receptor (GDNFR) sequences, including human CY 170al0.rl. It seems to receptor GDNFR sequences are another CY 170al0.rl. It seems to result of these EST-derived sequences (see T84980-81) or CY 170al0.rl. It seems to relates to native rates to compress them. The invention relates to native rates CY 170al0.rl. It seems to relates to native rates CY 170al0.rl. It seems and soluble derivatives CY 170al0.rl. It seems to seem the derivatives CY 170al0.rl. It seems to see the semicons which CY 170al0.rl. It seems to see the compress to the CY 170al0.rl. It seems for the GDNFR alpha, including agonist and neutralising CY 170al0.rl. It seems for the sems for detecting ligands to GDNFR alpha, and set of GDNFR alpha, and set of GDNFR alpha, including seems for conditions, methods for the treatment of GDNF-related conditions, methods for the treatment of GDNF-related and GDNFR alpha-related CY 170al0.rl. It seems to conditions, particularly kidney disease associated with CY 170al0.rl. It seems to condition and knockout animals are also claimed.

PT Isolated glial cell derived neurotrophic factor receptor alpha - elevelop products to diagnose and treat associated disorders, particularly enteric nervous system or kidney disorders PT disorders, particularly enteric nervous system or kidney disorders PT disorders, particularly enteric nervous system or kidney disorders PT Stample 1; Page 61; 100pp; English.

CC This DNA sequence comprises a human EST-derived sequence designated CC ye83h05.rl. It can be used to identify glial cell derived human EST-derived sequences for CDNFR sequences are another CC variants. Also suitable as probes for CDNFR sequences are another CC compression of these EST-derived sequences (see T8490), and CC fragments of these EST-derived sequences (see T8490), and CC fragments of these EST-derived sequences (see T8490), and CC gone alpha (see W27327), its variants and soluble derivatives (extracellular domain), chimeric GDNFR alpha and antibodies which CC bind to the GDNFR alpha, including agonist and neutralising captaints are obluble derivatives (systems for identifying GDNF-related conditions, methods for techniques for identifying GDNF-related conditions, methods for cethods for the treatment of GDNFR alpha, and claimed conditions, particularly kidney disease associated with CC conditions, particularly kidney disease associated disorders.

CC Transgenic and knockout animals are also claimed.

CC Transgenic and knockout animals are also claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

Claim 1, Page 73; 106pp; German.

The DNA shown is found in human or animal cells that have an unlimited capacity for unlimited cell proliferation or tumour formation. They have no ability to promote immortalisation of the cells, and are usually found in a DNA-proteth complex in the cell cytoplasm. The DNA is useful for detection of these complexes, and diagnosis of malignant tumours. Differentiation between cells with unlimited and only transient proliferation is possible. Introducing random point mutations into nucleic acods -
Introducing random point mutation of molecules and screening.

Disclosure: p; English.

CR Random point mutations were introduced into the alpha fragment of
CE E. coli beta-galactosidase. The wild type sequence was obtained as of
CS ingle stranded template and an oligonucleotide was hybridised to
CS ingle stranded template and an oligonucleotide was hybridised to
CC it to generate a popn of DNA molecules which terminate at all
CC possible nucleotide positions within a specified region. The
CC variable 3' ends generated in this way are used as primers for
CC transcriptase and the molecules are misincorporated by the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PS Example 1; Page 61; 100pp; English.

CT This DNA sequence comprises a fragment of a human EST-derived so gequence designated ye83h05.rl (see T84978). It can be used as CC a probe to identify glial cell derived neurotrophic factor receptor CC (GDNFR) sequences, including human variants. The invention relates ct novel uses of GDNF and its receptor. In particular, it relates CC (extracellular domain), chimeric GDNFR alpha and antibodies which CC (extracellular domain), chimeric GDNFR alpha and antibodies which CC (extracellular domain), chimeric GDNFR alpha and antibodies which CC bind to the GDNFR alpha, including agonist and neutralising CC relates to assay systems for detecting ligands to GDNFR alpha, can consist of constitutions for identifying GDNF-related conditions, methods for techniques for identifying GDNF-related conditions, methods for CC dentifying molecules homologous to GDNFR alpha, and claimed CC methods for the treatment of GDNF-related and GDNFR alpha related CC dentifying molecules homologous to GDNFR alpha, and claimed CC methods for the treatment of GDNF-related and GDNFR alpha related CC dentifying molecules homologous to GDNFR alpha, and claimed CC methods for the treatment of GDNF-related and GDNFR alpha related CC dentifying molecules homologous to GDNFR alpha, and claimed CC methods for the treatment of GDNF-related and GDNFR alpha related CC dentifying molecules homologous to GDNFR alpha, and claimed CC methods for the treatment of GDNF-related and GDNFR alpha related CC dentifying molecules homologous to GDNFR alpha, and claimed CC dentifying GDNF-related and GDNFR alpha and Claimed CC dentifying GDNF-related with CC dentifying GDNF-related disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ouery Match

Oligonucleotide probe MK14-A consists of nucleotides 5-95 of (051735). It hybridized to all spp. of mycobacteria tested, cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection. See also 051735-55 and 051747-59.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         amplified and then expressed in a suitable host-vector system. The sequence covers all 176 difft base substitutions, most of which occurred singularly in any given mutant.
                      New oligo:nucleotide probes specific for Mycobacteria - detection and amplification of Mycobacteria nucleic acid
                                                                                                                       Synthetic.

Random point mutations were introduced into the alpha fragment E. coli beta-galactosidase. The wild type sequence was obtained single stranded template and an oligonucleotide was hybridised it to generate a popn of DNA molecules which terminate at all possible nucleotide positions within a specified region. The variable 3' ends generated in this way are used as primers for reverse transcriptase. Nucleotides are misincorporated by the transcriptase and the molecules are completed to forms that can amplified and them expressed in a suitable host-vector system. The sequence covers all 176 difft base substitutions, most of w
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       oligonucleotide probe MK14-A consists of nucleotides 5-95 of (Q51735). It hybridized to all spp. of mycobacteria tested, cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection. CC 070469 is a generic DNA sequence used to generate random TSAR peptide

CC THis generic formula can be represented as follows: X(TGC)(NNB)10-

CC (TGC)(NNB)52(NNB)2(TGC)(NNB)14(TGC)Y. X and Y are flanking restriction

CC sites (X is not the same as Y) that are not specified further. This

CC sequence generates peptides that are cloverleaf in structure. Other

CC concatenated by these generic sequences are shown in R65150-54. TSARs are

CC concatenated by these generic sequences are shown in R65150-54. TSARs are

CC concatenated by triber comprises a linker peptides, comprising at least

CC two functional regions - a binding domain with affinity for a ligand and

CC active. They may further comprise a linker peptide between the 2 domains.

CC The oligonucleotides are also designed so that the expressed peptide

Identifying proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins comprising a binding domain and an effector domain Disclosure; Page 35; 255pp; English.

CC 070467 is a generic DNA sequence used to generate random TSAR (Totally Synthetic Affinity Reagents) peptides. This generic formula can also be represented as follows: x(NNB)16(TGC)(NNB)1Z(NNB)16(TGC)(NNB)1X x CC and Y are flanking restriction sites (X is not the same as Y) that are contained the specific peptides generated by these generic sequences are shown in 070466-68.

CC Other specific peptides generated by these generic sequences are shown in comprising at least two functional regions - a binding domain with cc affinity for a ligand and a second effector peptide portion that is chemically or biologically active. They may further comprise a linker peptide between the 2 domains. The oligonucleotides are also designed so that the expressed peptide contains 2 or 4 cysteine residues positioned in, or flanking, the unpredicted or variant residues. These residues confer some degree of conformational rigidity to the peptides. The CC deliver a chemically or biologically active moiety, eg. metal ion, cradioisotope, peptide, toxin or enzyme, to the specific target or on the cell. They can also replace the function of macromolecules, eg. composed the conformation of macromolecules, eg. complex methods of hybridoma formation or in vivo antibody production. CC direct and rapid detection in a screening process.

A method for treating airway disease in a subject has been produced, which involves the topical administration of an essentially adenosine free antisense oligonucleotide (ON) to the airway epithelium of the subject. The present sequence is an antisense oligonucleotide specific for the human interleukin 8, targeted at the initiation codon. The method can be used to treat airway diseases such as cystic fibrosis, asthma, chronic obstructive pulmonary disease, bronchitis and other airway diseases characterised by an inflammatory response. By eliminating adenosine from the antisense ON, its liberation upon antisense degradation is prevented, thereby preventing adenosine-induced bronchoconstriction in patients with hyper-reactive airways. sequence 172 BP; O A; 35 C; 42 G; 39 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          subject

Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library is not normalized. (The normalized version of this library is NCI_CGAP_BC.) Library was constructed by Bento Soares and M. Fatima Bonaldo."
